## Category: Automatic Hand Dryer Tips

### Subcategory: Automatic Hand Dryer Guide

#### **Tip: Maintaining Your Automatic Hand Dryers**

Automatic hand dryers are not so inexpensive that you can let them sit and replace them whenever you need to. Because of the initial expense involved, it is important to do the little things that will give your automatic hand dryers a long life of good use. Here are a few easy automatic hand dryer tips you can use to make yours last longer:

- **Clean the Trigger** – In automatic hand dryers, whether air or paper, there is a beam that reflects the user's motion that signals and triggers the machine to start working. Over time, this beam can be impeded by accumulated debris, making it more difficult to read the user's motions. Simply wipe this down regularly and you will not be faced with that problem.
- **Clear the Flow** – If you have automatic hand dryers that use air to dry, you need to regularly clear out the passage to get the best flow of air possible. Again, over time, there can be a build up of dust or other impediments. Most automatic air dryers have a simple process to clear this out and it will help you in the long haul.
- **Ground It** – When installing automatic hand dryers, make sure you use an electric current that is well grounded in the event of a power surge or storm. Nothing will kill an automatic hand dryer faster than an electrical surge that fries it. Consult an electrician to get the best installation advice. Follow these few steps and maintenance procedures and you will extend the life of your automatic hand dryers.

#### **Tip: Ventilation Fans - Keep Your Restroom Dryer**

Are you bothered by the slippery floors and fogged mirrors you get when getting out of the shower? If you want to keep your restroom dryer, you should look at installing a ventilation fan. Wet floors can be very hazardous when getting out of the shower. Slips are very common and tile hurts, I can assure you. A ventilation fan can suck the moist air out of the restroom before it can settle on the floor and mirrors. Ventilation fans are low cost and fairly easy to install with the right tools. First, go to your local home improvement store and explain that you want to keep your restroom dryer and need a fan to help. They will be able to help you pick out the right type of fan for you. See if you can test it first to make sure that the noise that it creates is not bothersome, as some can be very loud. Installation instructions should come with the unit and you can get this project done in no time. Be sure to consult an electrician before adding any new lines. This little project can keep your restroom dryer and you safer.

### Subcategory: Bathroom Germs Tips

### **Tip: A Few Tips on Good Bathroom Hygiene**

If you are concerned about bathroom hygiene but don't know where to begin in setting new habit for yourself, here is a brief bathroom hygiene guide. Bathroom hygiene is easy to keep up with is you just change what you are doing a little bit. First, keep your different cleaners separated. Keep your razors away from your toothbrushes. You don't want to be cleaning your teeth with hair and shaving cream stained toothpaste. Also, facial powder doesn't taste too good on dental floss, so keep makeup clear of everything else. The main way towards good bathroom hygiene is simple &ndash; keep the bathroom clean. Use the many bathroom cleaners that are available for each area of your bathroom. Regular usage of these items will give you an overall more sterile environment and this is at the heart of bathroom hygiene. You wouldn't be practicing good bathroom hygiene if you set your toothbrush down on a dirty countertop. Specific products are available for better bathroom hygiene. But if you want the basics, keep the area clean and your different toiletries separated.

### **Tip: Preventing Bathroom Germs From Spreading**

With what goes on in a bathroom, germs can build up over short amounts of time. If you want to prevent bathroom germs from becoming living room or bedroom germs, there are a few simple things you can do to help, a brief bathroom hygiene guide if you will. First, keep your bathroom clean on a regular basis. We are talking about deep cleaning here and not just wiping the counters. The bacteria and other bathroom germs that accumulate do not stay on the easy to get surfaces. They get into the nooks and cracks of your counters, toilets, and sinks and nothing short of a deep cleaning will do to remove them. Also, you can help the problem by using an antibacterial cleaner when you regularly wipe down your sinks and shower. These cleaners contain chemicals that can kill bathroom germs effectively. Combining deep cleaning with the use of antibacterial cleaners will keep bathroom germs to a minimum and, at least, keep them in the bathroom.

### **Tip: Getting over that public bathroom phobia!**

Listen, public bathrooms are scary enough as they are--even without an added phobia of them. So I decided that, instead of letting my phobia rule me, I would change how I felt about using public restrooms. - Everybody Goes For some people their phobia resides in the fact that they are nervous and embarrassed to be seen in public. Once you lock down the idea that everybody has to use the bathroom and most of them won't even acknowledge you while they are in there you can start to let go of that scared feeling. - Relax When you find yourself in the bathroom just try and relax. Claim whatever stall or urinal you desire, close your eyes, slump your shoulders, and just do

you. Don't think. Don't listen to your surroundings, just let yourself go. If this doesn't get you relaxed enough you can even add in a little breathing exercise. Try whistling softly, if you are alone, or humming a tune. The goal is to get your mind off of the topic at hand. - Claim Privacy Some people just don't like the lack of privacy a public restroom offers. Don't be afraid to go into a stall even just to go number 1. If that isn't possible then make sure you stand really close to the actual urinal, as it will hide you from the people next to you. If even that fails you can shield yourself with your hand while you go. At the very least those afraid of public restrooms should realize how little everyone else around them truly cares.

## Category: Buying Restroom Dryers

Subcategory: Push Button Hand Dryer Tips

### **Tip: Restroom Hand Dryer - Works for Everyone**

All businesses that offer restrooms to their customers or clients need to conform to handicap access regulations. Along these lines, installation of a handrail and other measures are often regulated. Not regulated, but important to provide the best access to your handicap or disabled customers, is a restroom hand dryer. Paper towel dispensers, even those mounted lower, require action from the user that some handicap or disabled people would have difficulty with. An automatic restroom hand dryer, however, will work for all of your restroom users without the need for what, for some, is a strenuous exercise. If you are trying to provide your handicap and disabled customers, clients, or diners with the best possible access in your restrooms, provide them with an automatic hand dryer to complete the job.

## Category: Choosing a Hand Dryer

Subcategory: Hand Dryer Guide

### **Tip: The Downside to a Plastic Hand Dryer**

With all of the choices now available in warm air hand dryers on the market, let us fill you in on one thing to steer clear of. Plastic hand dryers are often cost efficient, but when you figure that they rarely last as long as their cast iron or stainless steel counterparts and will need to be replaced far more often, the deal just isn't that good. You see, the warm air that is used in hand dryers will do more damage faster on a plastic hand dryer system. Plastics have been made far sturdier lately. However, even the sturdiest of plastics cannot compare to iron or steel. Therefore, the heat from the hand dryer will erode the plastic in less time than the metal units. If long life is a pre-requisite to your hand dryer purchase, we recommend sticking to the cast iron or

steel hand dryers available and steer clear of the plastic hand dryer. When choosing a hand dryer for your bathroom, you may want to think beyond plastic.

### **Tip: World Dryer - Your Solution for Hotel Hair Dryers**

For hotels offering their guests with extra bathroom amenities, hair dryers are a great one to add. World Dryer, a leading manufacturer of automatic hand and hair dryers, offers a commercial hair dryer model that would be perfect for any hotel or motel. These units are wall mounted and have extra long hose attachments for those people who like to wander while they dry. World dryer also offers a warranty on each of their hair dryers that will be needed should you get the wrong guests. Small in size but large in power, these dryers can be used for hair, hands, nails, or even for the whole body out of the shower. They have adjustable heat levels so that your guests can get the comfort of home. If you want to provide your hotel guests with the most in bathroom amenities, give them a hair dryer that will be even better than the one at home.

## Category: Choosing Restroom Signs

Subcategory: Bathroom Sign Tips

### **Tip: Choosing the Right Restroom Sign for Your Establishment**

Design is always a matter of personal choice. When it comes to furnishing a place of business, however, your personal choices will be scrutinized by every client or customer's eye. Down to the smallest detail, you should have the friendliest design possible. Even your restroom sign can now fit in with your overall look, keep that in mind when choosing restroom signs. Choosing a restroom sign that will fit with your motif is not as hard as you may think. Advances in plastics have made creating custom bathroom signs far easier for manufacturers. You can choose from hundreds of different bathroom sign styles and colors to match what you are looking for. Simply contact one of the many manufacturers of bathroom signs to see the full gamut of choice that you have. Details, details, details are the key to a friendly establishment. From you entryway to your bathroom signs, provide your guests or visitors with the friendliest environment possible.

## Category: Hand Dryer Guide

Subcategory: Hand Dryer Tips

### **Tip: Kitchen Sanitation - Air Dryer Over Paper**

In restaurants, kitchen sanitation is of the utmost importance and should be watched

with a keen eye. There are many aspects of sanitation that are overlooked. All restaurants hand strict hand-washing guidelines for their employees, but few dictate how to dry your hands after washing. For the most sanitary results, use an air dryer instead of paper towels. Industrial paper towels are made from materials that can flake as you dry. With an air dryer, there are no such impediments that could remain after you finish drying. Some kitchens even use regular towels instead of paper, which after being used by two or three people, will carry extra particles from each. With an air dryer in your kitchen, nobody will share anything but the sink. If you have a restaurant and want to ensure that you have the most sanitary kitchen you can provide, have your kitchen staff use an air dryer instead of towels to finish the job.

### **Tip: Paper or Air - The Better Hand Dryer**

When you are using a public restroom you often have the choice between paper towels and wall mounted hand dryers. Many restrooms only offer one or the other, but some do still have both. When deciding how to dry your hands, think about this choice before heading to the paper. The hot air powered hand dryer was invented and put into mass distribution for many reasons. First, is the environmental purpose. You see, few people use only the amount of paper towels that they need to dry their hands and instead use copious amounts of paper. This waste leads to the need for more paper, which leads to more tree cutting. The second reason is related to the first. The waste of paper is also costly to the proprietors of these restrooms, whether the state or private owner. The air hand dryer leaves no waste. Owners do not need to order more paper towels when they employ wall mounted hand dryers and this keeps their costs down greatly. Next time you have the choice between paper towels and a wall mounted hand dryer, think about your decision and its repercussions before drying your hands.

## **Category: Hand Dryers VS Paper Towels**

### **Subcategory: Hand Dryers VS Paper Towels**

#### **Tip: Provide Both Air Dryers And Paper Towels At Busy Venues**

Although restroom hand dryers offer many benefits such as cutting costs, eliminating paper towel waste, and saving trees, many customers who use public restrooms in restaurants, movie theatres, and other facilities do not like them. To keep customers happy and enjoy some of the benefits of restroom automatic dryers, consider a compromise: Install some of each. Some people find the air hand dryers time consuming and they don't think their hands are dried as thoroughly as with paper towels, despite evidence to the contrary. But people do use restroom automatic dryers, and installing both can still save money and time. Consequently, many businesses have opted to install both air hand dryers and paper towel dispensers in public restrooms, especially in places such as movie theatres that experience a high volume of use at

certain times.

**Tip: Restroom Air Dryers Are Easily Used By Elderly**

Restroom automatic dryers may be a good choice for public restrooms in nursing homes or other long-term care facilities. Older people with sensitive skin or those who suffer from arthritis may prefer a restroom hand dryer to paper towels for several reasons: Sanitation: Paper towels can transmit germs, and they can be left lying on the floor because it is difficult for an older person to bend over and pick up a paper towel that misses the trash can. Comfort: Industrial paper towels are often rough and can be especially uncomfortable for the elderly, who may have dry or sensitive skin. Ease of use: Pushing a button to turn on an air hand dryer is easier than pulling paper towels from a dispenser for someone who suffers from arthritis of the hands.

**Tip: Restroom Automatic Dryers Discourage Vandalism**

Paper towels in public restrooms can be fodder for vandals. The towels can be moistened and thrown against walls, or set aflame and used to start larger fires. In addition, paper towels jammed into sinks and toilets can cause clogs that are time-consuming and costly to fix. Installing air dryers in a public restroom takes away the temptation to use paper towels for vandalism and spares the business owner the worry about attracting vandals who might be looking for fire-starting material.

**Tip: Try Air Dryers In Day Care Centers, Save Paper And Money**

The public restrooms in day care centers can benefit from air hand dryers in several ways: Cost: Over time, organizations that use warm air hand dryers can save significantly compared with the money spent on paper towels during the course of a year, which can make a significant difference in childcare centers on tight budgets. A warm air hand dryer costs approximately \$500, with very little additional cost over time, while paper towels can cost \$25 a case. Buy more than 20 cases of paper towels a year? A hand dryer will save you money.

Ease of Use: Day care providers who help children in the restroom may find it easier to push a button and help the child rub his or her hands together under the warm air hand dryers than to struggle with paper towels and have them littering the floor by the time a squirming child has dry hands.

Reduced Spread of Germs: Eliminating paper towel litter also helps reduce the transmission of infection that can occur if children share paper towels or pick up used towels from the floor or trash can.

**Category: Hand Hygiene Tips**

## Subcategory: Hand Hygiene Guide

### **Tip: Defense Against Germs? Keep your Hands Clean**

Keeping your hands clean is not just for germaphobes. Basic hand hygiene should be practiced by everyone, regardless of whether you believe in 'germs' or not. For those that are concerned with contracting illness and are looking for simple steps they can take to protect themselves, keeping your hands clean is a great start. Our hands come into contact with more surfaces and elements than any part of our body. They also transfer the food we eat into our mouths. With so many opportunities, your hands can be exposed to germs many times in a given day. Now, I am not suggesting that you wash your hands every time you touch something, or carrying wetnaps in your pocket. However, keeping your hands clean as much as is reasonable is one of the best hand hygiene tips available. It can help protect you from all of the elements your hands may encounter.

## Category: Handicap Bathroom Guide

### Subcategory: Handicap Bathroom Tips

#### **Tip: Common Errors in ADA Compliance Construction**

AmeraProducts, Inc. Tip: In many instances, proper ADA compliance construction fails because the doors to the bathroom stalls swing the wrong way. There is a required clear floor space regulation near any accessible fixtures, dispensers, or controls. Be sure that you allow the proper clearance for your bathroom stalls.

#### **Tip: Replacing a Loose Grab Bar**

If you have handicap bathroom stalls in your restrooms, you need to keep safety a priority. After years of usage, these handicap restroom accessories will wear down like anything else. One of the most important handicap restroom accessories are grab bars, and they can go quickly. When you notice one of your grab bars may be getting loose from the wall, you need to address the problem immediately. Any future user could pull it completely from the wall and you could be facing serious fines and possible lawsuits. With a loose grab bar, you are often faced with totally replacing it when it loosens. These are typically anchored into the wall and if they loosen, this means the anchors have gone bad. Usually, this will mean that you will need to drill out new spaces for the wall anchors. You may be able to reuse the original grab bar once you have new anchors in place. However, be sure that you don't need a whole new bar. Again, just picture the consequences of not doing it right.

### **Tip: Requirements for a Handicap Hand Dryer**

For public restrooms, there are many regulations regarding handicap access and it's a good idea to read up on all of the rules and regulations in a handicap bathroom guide. When it comes to hand dryers, there are few requirements that stand out. One, however, is glaring and, thanks to modern technology, is easy to conform with. ADA requirements state that a handicap hand dryer must require non-controlled delivery of the air. This means that the units in handicap stalls must be touchfree or motion activated. Disabled persons would have a hard time in many instances with pushing the button to make the dryer activate. A properly accessible handicap hand dryer will only require the user to wave their hands beneath the dryer to start it. This small reduction in effort makes a world of difference for people unable to perform the many simple actions the healthy take for granted. Make sure you provide motion activated handicap hand dryers for your patron if you run a restaurant, gas station, or other facility offering handicap accessible restrooms.

## Category: Handicap Restrooms

Subcategory: Handicap Restrooms

### **Tip: Paper Towels: Know The Right Height**

A paper towel dispenser is an important handicap bathroom fixture, either by itself or as an accompaniment to an automatic dryer. To meet criteria established by the Americans With Disabilities Act, install paper towel dispensers 15-48 inches (380-1,220 mm) above the floor. This height allows people in wheelchairs to access the towels by reaching forward or to the side.

## Category: Maintaining a Bathroom

Subcategory: Bathroom Supplies Tips

### **Tip: 5 Essential Bathroom Cleaners**

There are many different areas that need cleaning in a bathroom. No one instrument or cleaner can tackle them all. If you plan on maintaining a bathroom, here are 4 essential bathroom cleaners that every bathroom should possess. 1. Toilet Brush &dash; Nothing in your bathroom gets more use than the toilet. A good toilet brush is necessary to keep the dirtiest part of the bathroom clean. 2. Glass Cleaner &dash; With mirrors and maybe even glass doors to a shower, every bathroom needs glass cleaner for at least a few areas. 3. Mildew Remover &dash; Between showers, sinks, and toilets, bathrooms are a haven for mildew growth. Many name brand mildew removers are available and each will work well. Mildew can lead to major problems, so be sure to get

this one. 4. Tile Cleaner &dash; If you have a tiles shower or countertop, you will need a good tile cleaner and sponge. These cleaners work on controlling mildew, bacteria, and many other dirty details in your bathroom. Make sure you have each of these bathroom cleaners on hand to keep your bathrooms as clean as a whistle.

## Category: Pay Toilets

Subcategory: Pay Toilets

### **Tip: Pay Toilets Can Be Disengaged During Busy Times**

Own a restaurant or other business that experiences peak traffic at certain times? Want the security of pay toilets but want to avoid causing customers extra hassle during the dinner rush? Some types of pay toilets, such as models from Nik-o-lok, can be deactivated during busy times. In addition, coin- or token-operated pay toilets come with separate keys that allow authorized employees or emergency personnel to access the toilet at any time.

## Category: Public Bathroom Tips

Subcategory: Public Bathroom Tips

### **Tip: Public Restroom Privacy**

Particularly when traveling to an unknown location, many people are concerned about privacy in public restrooms. Although people living in the United States can expect that by law, they are entitled to their privacy, that may not be the case in other countries. There should always be partitions between public urinals, and these should be long and tall enough to allow privacy. Every toilet should have a door that locks properly. Mirrors should be placed in a way that protects the privacy of restroom users, although this may not be possible in smaller restrooms. With the recent advent of concealed security cameras, some private establishments may install them in their restroom facilities. This could deter criminal activity, but privacy could be compromised.

## Category: Public Restroom Advertising

Subcategory: Public Restroom Advertising

### **Tip: Go High-Tech With Flat Screens For Indoor Advertising**

Flat screen technology provides a new form of indoor advertising that can be used in public restrooms. Flat screens are becoming popular in large venues, such as stadiums and upscale shopping areas, where money is no object. Data from the advertising company Media Life indicate that New York's John F. Kennedy Airport has at least 50 flat screens in men's and women's restrooms that run still frames of individual ads in 30-second loops. Each ad shows for three seconds, two times per loop. In some high-tech venues, ads are beamed to flat screen TVs in restrooms.

**Tip: Restroom Advertising Guarantees Gender-Specific Audience**

Use of restroom advertising means that businesses can target specifically men or women by placing different ads in men's and women's bathrooms. For example, an acne medication from Proctor & Gamble was placed in restrooms in the New York Subway system several years ago; the ad lettering was printed backwards so women could read it while looking in the public restroom mirrors. In addition, ads designed for either gender can be placed in unisex or family restrooms.

**Tip: Yes, The Public Accepts Restroom Advertising**

Data from interviews conducted in 14 locations in New York City, Boston, Chicago, and Philadelphia showed that 75% of interviewees said they thought restroom advertising was "a good idea." Only 2% said they thought restroom advertising was a "very poor" idea, and 43% said it was a "very good." Additional data from the same study revealed that 24% of those interviewed reported a more positive response toward a brand after seeing it advertised in a public restroom, compared with just 5% who reported a negative response to a brand. The remainder of the interviewees said that they were not affected either positively or negatively about the brand after viewing the restroom advertising.

## Category: Public Restroom Baby Changing Guide

Subcategory: Diaper Changing Pull Down Station Tips

**Tip: Using a Diaper Changing Pull Down Station**

AmeraProducts, Inc. Tip: There is a chance that a pull down diaper changing station you encounter has been around for a while. To be sure that you keep your baby safe from what other babies may have left behind, make sure you use the paper covers that the changing station provides.

**Tip: Using a Diaper Changing Pull Down Station**

Nothing is more precious than your baby. If you are traveling and need to use a diaper

changing pull down station, be sure that you keep your baby safe by observing some simple precautions for their use. • Set-Up &ndash; Most diaper changing pull down stations are constructed so that anyone can easily set it up safely. However, this technology is nothing that new and many units have had a lot of uses. When you pull down the baby changing station platform, double check for its sturdiness before setting your baby on it. Just apply pressure with your hands to make sure it is firm. Always be sure to follow the instructions provided on the diaper changing pull down station. These units are inspected heavily before being put on the market and the instructions are your best key to safety.

Subcategory: No Changing Table?

**Tip: What To Do When There is No Changing Table**

While many restaurants, ball parks and malls have baby changing tables, you will sometimes run across a place that doesn't have a flat surface for you to change your baby. If this is the case and you're looking for a private place, put a baby blanket on the floor of the bathroom and a changing pad above that. After you change the baby, either put the baby blanket (which is now dirty) far from the baby or fold it so the dirty side is facing outward.

## Category: Public Restroom Feminine Hygiene Guide

Subcategory: Public Restroom Dispenser Tips

**Tip: Installing a Coin Driven Sanitary Napkin Dispenser**

Mounting a sanitary napkin dispenser on your walls is a job that almost anyone can handle, you don't need an elaborate public restroom feminine hygiene guide to pull that one off!. Most sanitary napkin dispensers collect coins to distribute the napkins and these units come with very specific instructions for their installations. This is necessary because the owner will need to access the change receptacle frequently, which would be difficult in the face of an improper installation. To begin installing most sanitary napkin dispensers, you will need to choose your spot on the wall for it. Because you want to get an accurate vision of the finished job, but don't want to life the unit up over and over again to measure, take advantage of this small tip. Cut out a piece of the cardboard that the unit came in to the same dimensions as the sanitary napkin dispenser. Use this to trace out where you will place the dispenser on the wall. Next, depending on your unit, you will need to mount the bracket on the wall to which you will affix the sanitary napkin dispenser in the end. These units often have a snap-lock system between the bracket and the unit. Other units will require anchored screws to be used for mounting. Either way, the key remains the same &ndash; measure twice and drill once. Once the unit is mounted, your sanitary napkin dispenser should be ready for

operation. If your model doesn't want to cooperate in its installation, contact the manufacturer for detailed troubleshooting.

### **Tip: Using a Toilet for Tampon Disposal**

In the past, using a toilet for tampon disposal was a ticket to one thing &ndash; a clogged toilet. Today, however, tampon makers have helped with this problem. Any public restroom feminine hygiene guide will tell you that flushing applicators is a big no-no. However, many companies are now making tampons with applicators that are made of materials designed to break down in heavy water. This means that when these tampons are flushed, they will not be around for long enough to clog your toilet. Tampax was the first to introduce toilet safe tampon disposal. Other manufacturers have followed and now almost any major brand, probably including your brand of choice, can provide you with these convenient models. Take a look into this at your local drug store. Save yourself the trouble of unclogging your toilet by only practicing tampon disposal in the toilet with the right kinds that won't give you problems.

## Category: Public Restroom Regulations

Subcategory: Public Restroom Regulations

### **Tip: Warm Air Hand Dryers Reduce Time Spent On Waste Management**

Public restroom regulations related to waste management can be minimized with the installation of warm air hand dryers as an environmental, waste-free alternative to paper towels, because paper towels make up the majority of the waste in restrooms where they are available. Data from manufacturers such as Sani-Flow suggest as much as 90% cost savings with warm air hand dryers compared to paper towels. This includes the waste management costs of collecting and disposing of the towels, which cannot be recycled once they have been used.

## Category: Public Restroom Supplies

Subcategory: Public Restroom Supplies

### **Tip: Accessorize Public Restrooms With Hooks And Shelves**

When designing and outfitting a public restroom, a simple hook on the inside of the door is a much-appreciated restroom accessory. And it's not just a place to hang a purse. Placing hooks on the inside of a stall door in any public restroom gives customers a place to hand a coat, too. If space permits, consider a small pull-down shelf, especially in an office building setting, so customers have a place to set a stack of papers or a

notebook without having to place them on the floor inside the stall; people often want a place to put things but they also want to avoid touching the germey floor of even the cleanest public restroom.

**Tip: Hire A Public Restroom Designer To Maximize Efficiency**

If you are in the construction or architecture business, and are building an outdoor facility such as a soccer complex, golf course, or playground, consider hiring a professional public restroom company to handle the design and construction of a freestanding public restroom facility. Professionals such as The Public Restroom Company will evaluate your site and consider variables including traffic, placement of utilities, possible weather issues, and more. These public restroom companies will construct the facility and ship it to the site, where it can be installed in about a day.

**Tip: Keep A Battery Diary For Touchless Automatic Hand Dryers**

The biggest maintenance issue for touchless automatic hand dryers may be changing the batteries. Although some touch-free systems have alarms that sound when the battery is running low, it makes sense for business owners to keep a log, a “battery diary,” so all employees know when batteries were installed.

But be advised: The newest models of touch-free public restroom equipment have photoelectric sensors and make batteries obsolete.

## Category: Public Urinals

Subcategory: Public Urinals

**Tip: Install Waterless Urinals With Ease**

When retrofitting a public restroom with a waterless urinal, using the flange that is already in place from a conventional urinal saves time and effort. The installation process is similar, and the installation heights from the floor required by most U.S. plumbing codes are the same for waterless and standard models: 24 inches (610 mm) for non-handicap settings and 17 inches (196 mm) to comply with the requirements of the Americans With Disabilities Act.

**Tip: Take Portable Urinals To Where There Are No Restrooms**

Portable urinals provide peace of mind while traveling or during recreational activities where there may be no public restrooms. For example, a portable urinal is helpful to have on board when spending long periods of time on a boat. Mid-sized pontoon boats,

also known as “party barges,” or mid-sized fishing boats may have portable changing rooms, but they will not have plumbing. Savvy boat owners who keep a portable urinal discreetly located on board provide their passengers with a sanitary option in case of emergency, and eliminate the need to travel back to shore and disrupt an excursion to find a public restroom. In addition, families with children participating in sports may find that fields are located in remote places without public restrooms, and a parent who has a portable urinal in the car may be a hero, if not for the kids, then for other parents who feel uncomfortable answering the call of nature in nature itself.

**Tip: Waterless Urinals Banish Bacteria**

Waterless urinals reduce the amount of bacteria present in public restrooms because the bowl remains dry. Normal urine is sterile; it contains virtually no bacteria. Bacteria thrive in moist places, but they die when dry. Standard flush urinals have chronic damp spots in which bacteria can grow, but the dry surfaces of waterless urinals reduce the prevalence of bacteria. In addition, waterless urinals reduce the spread of bacteria through hands because there are no flush handles to touch.

## Category: Restroom Sanitation

Subcategory: Restroom Sanitation

**Tip: One Auto Hand Dryer Can Pay For The Next One**

If you're a business owner considering an auto hand dryer, but unsure of the cost-effectiveness, consider starting with one auto hand dryer, in addition to paper towel dispensers. Although dryers cost \$200-\$500, depending on their features, the long-term savings are significant because of the saving on paper towel refills. So, once you've saved some money after installing one dryer, you may find that you have enough to install a second one, and get rid of the paper towel dispenser.

If installing an auto hand dryer in a public restroom in a building with cement or concrete walls, extra conduit cables may be needed to carry the wires to an outlet. Consult an electrician to determine the best way to install an auto hand dryer.

## Category: Soap Dispenser Guide

Subcategory: Soap Dispenser Tips

**Tip: Advantages to Installing Automatic Soap Dispensers**

AmeraProducts, Inc. Tip: Installing touchless soap dispensers is both affordable and easy. Many of the touchless soap dispensers range in price between a mere \$12 to \$25. Of course, depending on the style and size you want, the prices could vary from this range. Installation of touchless soap dispensers is easy because many of them don't involve tools and can be applied to any surface.

### **Tip: Advantages to Installing Automatic Soap Dispensers**

There are many advantages to using automatic soap dispensers in public restrooms. The main ones are sanitation, conservation, and overall convenience. Here is a quick soap dispenser guide that addresses each of these advantages: • Sanitation &ndash; Public restrooms get so many visitors that many people prefer to touch as few things as possible while using them. This has led to the automatic sink, the automatic hand dryer, and now the automatic soap dispenser. With an automatic, touchfree soap dispenser, your visitors will no longer need to touch the same surface that hundreds of others have touched after using the restroom. • Conservation &ndash; These automatic soap dispensers lead to conservation because the amount of soap distributed can be more controlled on an individual user basis. These systems can allow you to dictate how much soap is released per use and this will inevitably lead to less consumption by your visitors. • Convenience &ndash; As common as other touchfree technologies have become, people are growing rather accustomed to having this convenience in as many places as possible. This convenience is even greater with automatic soap dispensers because it requires less action from the user to get the job done.

### **Tip: Upgrading Your Commercial Soap Dispenser**

If you are remodeling a public or semi-private restroom in a commercial space, a big upgrade would be to replace your commercial soap dispensers. There are many newer types of commercial soap dispensers that are well constructed and offer new advantages. Here is a simple new soap dispenser guide to help in your selection: First, there are new commercial soap dispensers that offer better control systems. This means that the flow of soap can be more controlled and save you from spills in the end. The savings you can see are great by not having to order soap quite as often. Also, there are new, automatic commercial soap dispensers. The automatic dispensers offer your users the convenience of the dispenser without the uncomfortable need to use their hands to get the soap. More and more people are concerned about germs and these automatic dispensers can provide them with more comfort. Upgrading your commercial soap dispensers is easy. Most simply require two screws into the mounting bracket before affixing the unit. These can be changed out in less than an hour and will make a big difference in your finished remodeling project.

### **Tip: Installing Recessed Toilet Paper Holders**

Installing recessed toilet paper holders is a little different than the typical toilet paper holder installation. Because the unit is recessed in the wall, you need to use different tools, including a good drywall saw. Your first step is to measure the size of the hole you will need to cut in order for the recessed paper towel holder to sit properly. It is helpful to create a mold of the size and use it for outlining. Next, once you have clearly marked the lines of your hole, use a drill to open an access for your saw. Once you can get the saw into the gap, you can begin cutting out your needed space. You can also use a drill bit to cut out the hole, but a jigsaw will give you the cleanest lines. Now that the hole for the recessed toilet paper holder is made, you will need to slide the holder into position within it. Your unit may have either screws to affix it to the wall, or built in latches that only require assistance in locking in place. Either way, consult your instruction manual from this step forward. Proper installation is the key to prevent someone pulling the unit out of the wall when all they wanted was a few sheets of toilet paper.

### **Tip: Self-Standing Toilet Paper Holders - A Convenience for Sure**

In many bathrooms today, people are passing on installing toilet paper holders as fixed accessories in their restrooms. Instead, many are using self-standing toilet paper holders as both decoration and convenience. There are benefits to these types of toilet paper holders, and here are a few.

- **Always In Reach** – With these types of toilet paper holders, any user of any size can easily reach and be able to tear off the toilet paper that they need. In many bathrooms, the distance from the toilet that the paper maintains makes it awkward to reach for what is needed. With the self-standing units, they are free to move around on the ground.
- **Design** – Because these toilet paper holders are not affixed to any surface in your bathroom, when you decide to change the design in the future, this will not mean tearing things from the wall and spackling holes. You can just buy a new design of holder for your new design of bathroom.
- **No Assembly Required** – Most self-standing toilet paper holders come right out of the box, ready for use. The closest thing to assembly is sliding a fresh roll of Charmin on the roller. For anyone who has had to install a wall-mounted toilet paper holder, you can see the convenience right away.

## Category: Types of Hand Dryers

### Subcategory: Types of Hand Dryers

### **Tip: 360-Degree Nozzle Adds Flexibility to Automatic Electric Dryers**

When choosing a hand dryer, consider the nozzle, and the clientele of the public

restroom where the dryer will be installed. Some models, such as the A Series from American Dryer, feature a nozzle that rotates 360 degrees. The advantage is that it can be turned upward to dry the face as well as the hands. This is especially handy in a dormitory or in a commercial setting where employees might be washing their faces for various reasons.

### **Tip: Touch-Free Automatic Hand Dryers Promote Hand Hygiene**

The advent of “no-touch” or “touchless” motion sensors is one of the most important developments in automatic hand dryers in recent years, and it may be contributing to the increased use in hand dryers in response to the public interest in more hygienic public restrooms. For example, American Dryer, a company that has been manufacturing restroom automatic dryers for decades, has developed a line of touchless products called Global GX. The touchless dryers turn on with a motion sensor when users move their hands under the dryer, thus eliminating the transmission of germs through contact with a communal push button.

Hand dryers aren't new; they first appeared in public restrooms more than 50 years ago, but their presence has not been widespread because original air hand dryers were loud, large, and not very effective. But current air hand dryers dry hands quickly and quietly, and many types of hand dryers are available to suit the needs of any public restroom.

### **Tip: Want An Extra Flashy Hand Dryer? Go For The Gold**

Automatic hand dryers can be found in different colors, which helps public restrooms comply with ADA requirements—a restroom automatic dryer in a contrasting color from the restroom wall is easier for visually impaired persons to see and use. Most models are available in black, white, graphite, stainless steel, and sometimes custom colors such as red or blue. But that's not all. For a Las Vegas touch in a public restroom, Saniflow offers a gold-tone automatic hand dryer with the same features as its other models and all the benefits of hygiene, low maintenance, and cost savings. The price is comparable, too: \$325 for gold vs. \$295 for a chrome finish.

### **Tip: Signage Is Everything If You Provide Unisex Bathrooms**

AmeraProducts, Inc. Tip: If you see a family restroom with a baby-changing logo, it's likely there are koala baby changing stations within. These baby stations are made by Koala Bear Kare and offer protection from germs with an antimicrobial substance. Koala

baby changing stations also come with liners to protect your baby from sickness or germs from the baby who was there before.

**Tip: Unisex Bathrooms Save Money And Effort**

Consider a unisex bathroom if you own a small business and don't want to take the time to clean two bathrooms. A single, unisex bathroom with one toilet, sink, hand dryer, and soap dispenser should serve a small business well. If the unisex bathroom is one room without separate stalls, it can include both a urinal and a toilet. A key benefit to a unisex bathroom is that there is only one public restroom to clean, and that's especially important if you, the small business owner, or your employees are the ones who clean it.

**Tip: Wall-Mounted Child Seats Let Either Parent Use Public Restrooms Safely**

AmeraProducts, Inc. Tip: Wall-mounted child seats are fairly new, so check with your usual source for restroom fixtures and supplies and ask other business owners. However, Koala Bear Kare is a reputable company that has all types of baby changing stations, as well as the wall-mounted child seats. Koala Bear Kare also offer station and seat liners to protect your baby.
